

Sixteen consecutive cholangiogram forceps, still functional, from five or six different manufacturers were dismantled and inspected for internal cleanliness. All sixteen were contaminated as shown below. Endovision offers you a choice of Sterile Single-Use forceps (MAS-007) to totally eliminate cleaning concerns and a Flushable design (MAS-006) which offers improved cleanability compared with the standard instrument - Strict adherence to cleaning protocols is still very important. Please call Michael or Adam Swan at Endovision, (03) 9550 1819 for further details.
